Operational Guide

Warehouse & Inventory Management System

Employee Training & Systems Mastery

System Access & Control

Secure Login

Access the app via registered email/password. Role-based permissions ensure security. Never share credentials.

Live Dashboard

Get a quick status overview of business and inventory. Use summaries for rapid decision-making.

Profile Control

Manage personal information and ensure proper logout after finishing tasks to maintain system integrity.

Business Configuration

Module	Purpose	Core Operations
Company Setup	Profile identity	Manage name, address, currency, and branding documents.
Tax Setup	Regulatory compliance	Define tax records used in all purchase and sales transactions.
Number Sequences	Document tracking	Automated ID formats for orders, stock, and product records.

**Settings should only be modified by authorized administrative personnel.*

Sales & Purchase Master Data

Centralized Entity Management

Maintain clean, duplicate-free records to ensure procurement and sales accuracy.

→ **Customer Records:** Grouping, category management, and contact sync.

→ **Vendor Records:** Business details and multi-contact associations.

→ **Hierarchy:** Create Groups and Categories before adding individual entities.

→ **Validation:** Always verify address and tax details before saving.

Inventory Master Data

- → **Unit of Measure:** Standardize metrics (PCS, KG, Box, Liter) for all physical transactions.
- → **Product Groups:** Classify items for granular reporting and warehouse organization.
- → **Product Lifecycle:** Define names, pricing, and physical/non-physical status during creation.
- → **Warehouse Setup:** Establish storage locations before initializing stock movements.
- → **Data Cleanliness:** Regular audits of master data prevent downstream errors in the supply chain.

Logistics trucks at loading dock

Optimized Sales Cycle

- **Sales Orders:** Capture customer requests with accurate pricing and tax details.
- **Delivery Orders:** Confirm stock availability and issue goods from specific warehouses.
- **Sales Returns:** Record returned goods and track immediate stock impact.
- **Validation:** Check stock levels before delivery to prevent fulfillment delays.

Strategic Procurement

Purchase Orders

Standardize vendor communication. Add products, quantities, and pricing before sending to suppliers.

Goods Receive

Increase stock levels upon delivery. Match physical arrivals with supplier invoices for precision.

Note: Enter "Goods Receive" records only after physical verification at the loading bay.

Intra-Warehouse Logistics

Step 1

Transfer Out
Initialize movement from source warehouse.

Step 2

In-Transit
Goods are moved between physical locations.

Step 3

Transfer In
Acknowledge receipt at destination warehouse.

Step 4

Reconciliation
Confirm quantities match between warehouses.

Stock Integrity & Audits

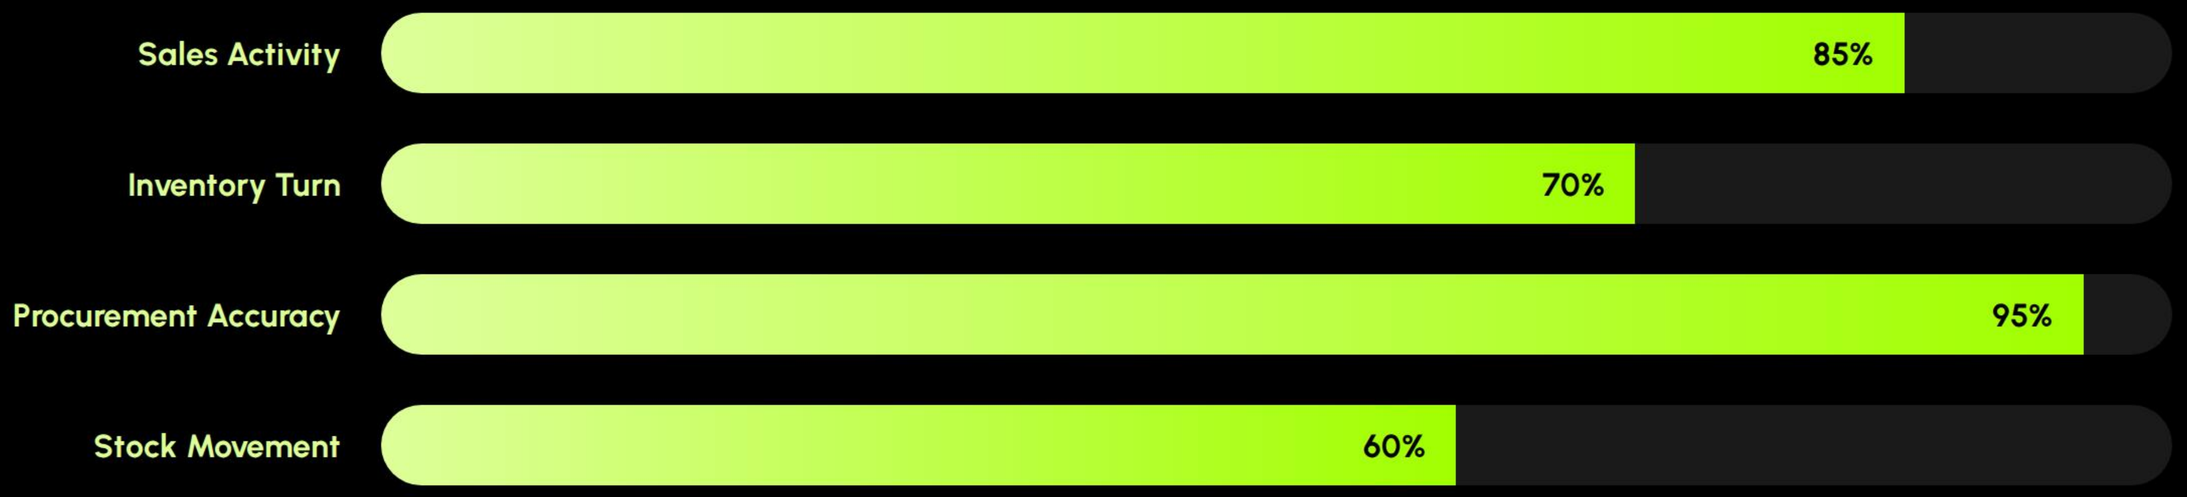
±5%

Audit Variance

Corrective Actions

- → **Stock Count:** Mandatory periodic checks against system records.
- → **Adjustments:** Use Positive/Negative adjustments only for approved corrections.
- → **Scrapping:** Formally remove damaged or expired stock from the inventory ledger.
- → **Reporting:** All adjustments trigger immediate audit trail records.

Intelligence & Reporting



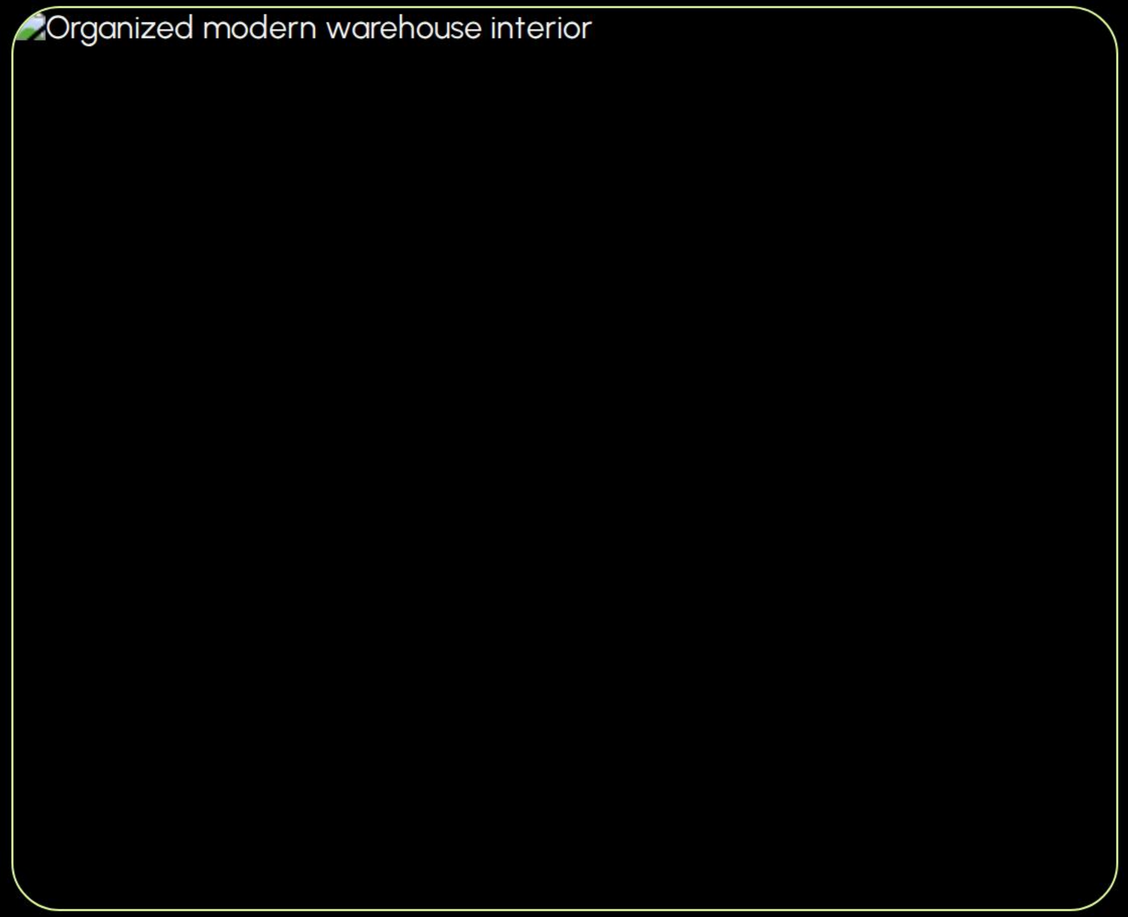
Utilize transaction, movement, and stock reports for reconciliation and daily management review.

Workflow Excellence

Daily & Month-End Cycles

Consistency in daily operations ensures a seamless month-end closing process.

- → **Daily:** Dashboard review, data entry for receipts/deliveries, and todo updates.
- → **Month-End:** Reconcile all returns, complete pending transfers, and perform stock counts.
- → **Rule #1:** Always logout after completing work to protect system data.



Q&A

Training Roadmap: 5-Day Intensive Onboarding

Day 1-2:

Login, Master Data, & Foundation Setup.

Day 3:

Sales & Purchase Cycle Mastery.

Day 4:

Logistics, Counting, & Reporting.

Day 5:

Practical Tests & Error Review.

System Support: admin@system.internal
